Portland General Electric

Highlight **safety and security** with area lighting solutions from PGE.

Dark parking lots and other areas around a building can pose a liability for businesses and building owners. Poorly lit areas often suffer a higher rate of vandalism, crime and accidents. Police agencies will tell you that good area lighting discourages illegal activity and helps prevent mishaps. It also makes a property more attractive to tenants.

We're lighting experts

To help keep your parking area and other outdoor areas safe and secure, Portland General Electric offers a convenient, affordable area lighting program. Imagine bright, reliable lights that turn on automatically at dusk and shut off at dawn. Dark areas are illuminated, and employees, tenants and customers can walk and drive through the parking area with confidence.

The first step to improving safety and security on your property is a consultation with our certified lighting design specialists. We draw upon our years of experience working with street lighting and security lighting to develop a custom plan for your property. We'll evaluate any existing lighting, and help you select the right poles and lights to fit your needs.

Everything for one low monthly fee

With this convenient lighting program, we own, install and maintain the lights for a simple monthly fee that's included on your PGE bill. Prices start as low as \$20 per month for a light and pole*. That's as little as 66¢ a day for peace of mind.

In addition to the custom lighting design, the low monthly fee also covers expert installation, regular guaranteed maintenance, and electricity. Repairs are covered in the monthly fee, too, so even if someone breaks the light or backs into the pole, there's no additional charge.

It's as easy as one call

To improve the safety, security and attractiveness of your parking area, call the Area Lighting department at PGE. Our lighting design specialists are ready to help you find the best lighting solutions for your property.

*Prices vary based on individual circumstances. Additional cost may apply to provide underground service to new area lights. If excavation is required for underground service, PGE is not responsible for any excavation costs, including installation of conduits and junction boxes. If service is above ground, one span of overhead wire less than 150 feet long is free. A line extension charge may apply; check with PGE for details.

A **Medium Floodlight**, which banishes dark, shadowy areas, is an appropriate choice for many commercial properties.

PGE fully supports dark-sky design concepts and offers a range of full-cutoff **dark-sky friendly lighting fixtures**. If your jurisdiction is concerned about light pollution, PGE can help.

Many other pole and light designs are available. Call us or visit our web site for more design options.

Expert streetlight installation and maintenance also available

If you are a municipality or an agency of a state or local government, you may qualify for our street lighting program. PGE takes care of more than 148,000 streetlights. So it's no wonder that when it comes to planning, installing and maintaining streetlights, we are experts.

If you need to install streetlights on public roadways or area lights on public property, we offer two options. Our Convenience Plan is all that the name implies. For a simple monthly fee*, PGE owns, installs and maintains the lights and poles. The fee also covers electricity costs as well as free design consultation.

You also have the option of our Power/Maintenance plan: you own and install the lights, and PGE provides electricity, maintenance and repairs.
